6.3 Patch 6

Document Date: 2/26/2019

What's New in 6.3 SP6

The following have been added in this release:

All connectors now support TLS 1.2

All connectors will now attempt to connect on TLS 1.2 first. If TLS 1.2 is not enabled, they will then connect on a lower protocol of 1.1 or 1.0.

Multiple Approvers allowed for LitHold

It is now possible to choose the *Any Selected* option on the LitHold approval screen. This new option will mark the hold as approved if any of the selected approvers complete the approval.

Start a collection from the LitHold screen

Users are now able to start a collection from the LitHold screen. This provides an easy link from the LitHold screen to the LitHold case.

Patches Important Information

Latest Documentation

- For the latest versions of the Release Notes, Administration Guide, and Reviewer Guide, download www.accessdata.com/productdocs/adediscovery/ediscovery.zip

General

- eDiscovery does not support Internet Explorer 8. Make sure that you are running Internet Explorer 9 or higher.

Installation

- This is a patch release for eDiscovery 6.3 only. Before installing this patch, you must have 6.3 installed. This patch will not work with a previous release. If you are using a previous release, upgrade to 6.3 first.
- Install this patch on any computer that is running a component of the application, such as services or Site Server.
- Before applying a patch release, backup the `\ProgramFiles\AccessData` folder. The patch will update DLL and CONFIG files under this folder. If you have a problem with the patch, you can simply revert to your backed-up files.
- During installation, Microsoft Framework .NET version 4.7.1 (4.7.02558) will automatically be installed if needed.
- After upgrading, it is important clear your Internet Explorer cache before using the upgraded version's web console.
- If Summation or eDiscovery is installed on a computer running English Windows, but you are accessing the console from a computer running Chinese Windows, by default, the console displays in Chinese. To have the console display in English, edit the FTK business services configuration file and add the following line:

```
<add key="OverrideSystemCulture" value="en-us"/>
```

Once that is done, restart Business Services. This will display English strings in the console when using a Chinese environment. (38031)
